

Lifting Certification

Torgy has previous experience from fabrication of several Subsea units (typically frames and other equipment) that have been subject to the requirement for lifting certification in accordance with DNV 2.7-3, Portable Offshore units. Recently Torgy also fabricated and delivered a Subsea unit (accumulator basket) that was subject to both load testing and drop testing as part of the stated requirements for lifting certification in accordance with DNV 2.7-1, Offshore containers. All lifting certification work takes place in close cooperation with client design engineering and a recognized lifting certifying body.
